

# NGUYEN VAN BINH

(+65) 8365 2435 • [nguyen.binh@u.nus.edu](mailto:nguyen.binh@u.nus.edu) • [linkedin.com/in/nvbinh/](https://www.linkedin.com/in/nvbinh/) • [github.com/nvbinh15](https://github.com/nvbinh15) • [nvbinh.site](http://nvbinh.site)

## EDUCATION

**National University of Singapore**

**Aug 2020 – Present**

**Bachelor of Engineering, Computer Engineering, Minors in Management and Data Engineering**

- Cumulative Average Point (CAP): 4.9/5.0 – Dean's List
- Expected Graduation Date: May 2024

## SKILLS

<b>Programming Languages</b>	Python, C/C++, Java, RISC Assembly
<b>Web Development</b>	Django, Django REST Framework, HTML/CSS/JavaScript, VueJS
<b>Database/Data Processing</b>	RDBMS, PostgreSQL, Hadoop, Spark
<b>Hardware</b>	FPGA Programming (Verilog, HLS), ARM-based MCU, Raspberry Pi, Arduino
<b>AI/Machine Learning</b>	Scikit-Learn, PyTorch, TensorFlow, Keras, AWS SageMaker
<b>Others</b>	Git, GitHub, Docker, AWS Cloud Services

## EXPERIENCE

**Machine Learning Engineer Intern, Neuron Mobility**

**May 2022 – Aug 2022**

- Trained and deployed machine learning models for scooter parking image classification on AWS SageMaker that achieve > 95% accuracy, detect bad parking behaviors with 0.9–0.98 precision scores and save US\$200,000 annually
- Built and dockerized a RESTful backend for an in-house annotation platform using Django REST Framework
- Performed experiments with RK1808 neural processing unit (NPU) for on-chip surface detection task on scooters

**Research Assistant, SEEDER Group – National University of Singapore**

**Jan 2022 – Present**

- Analyze the tradeoffs in learning algorithms for spiking fully connected and convolutional neural networks
- Design architecture and write assembly instructions for hardware accelerators for spiking neural networks on FPGA

**Teaching Assistant, School of Computing – National University of Singapore**

**Aug 2021 – Dec 2022**

*Placed on the Honor List of Student Tutor, nominated for Teaching Award*

Teaching Assistant for IT5003 Data Structures and Algorithms

- Conducted classes of ~20 Master students, reviewed DSA concepts and implementation techniques
- Showcase live coding in Python, provided consultations, graded, and gave feedback to weekly problem sets

Teaching Assistant for CS2102 Database System

- Facilitated teaching and discussion of Relational Algebra, ER model, SQL, and Database Normalization techniques
- Marked and gave feedback on database design and implementation project and weekly assignments

## PROJECTS

**Laser Tag** ([github.com/CG4002-B3/hardware-ai](https://github.com/CG4002-B3/hardware-ai) – team of 5 – capstone project): Augmented Reality shooting game

- Collected data, built, and trained a model classifying users' actions based on IMU data mounted on users' hands with 96.14% accuracy on test set using Pytorch; translated model to HLS and deployed it on Avnet Ultra96-V2 board
- Designed architecture; debugged and tested full system and other components (game engine, communications)

**ActiveNUS** ([activenus.up.railway.app](https://activenus.up.railway.app) – pair project – Orbital 2022: Advanced level of achievement): web application promoting efficient time management techniques and study methods

- Designed and built backend using Django and PostgreSQL, frontend using VueJS and AJAX
- Complied to standard Software Development Life Cycle (planning, designing, developing, testing, and deploying)

**RTOS Project** ([github.com/nvbinh15/cg2271-rtos-project](https://github.com/nvbinh15/cg2271-rtos-project) – team of 4): semi-automated car with light and sound

functions based on Keil RTX real-time operating system running on KL25Z board, breaks course's running time record

- Designed hardware and software high level architecture; implemented motor movements and communication protocols (WIFI using ESP32 module and UART); developed web controller interface using HTML/CSS/JavaScript
- Managed threads and processes, integrated components (LEDs, motors, buzzers, autorun) to the main module

## AWARDS & HACKATHON

- Hack&Roll, Jan 2022 ([devpost.com/software/disneylang](https://devpost.com/software/disneylang) - team of 3): developed and deployed a fun and annoying Discord bot that censors profanity and replies to user's message using Natural Language Toolkit
- Champions, Vietnam National AWS DeepRacer League, Dec 2019: developed reward functions and trained reinforcement learning models loaded to a physical autonomous car that completed a racing lap in 9.625s
- Bronze Medal, European Physics Olympiad, June 2019

## EXTRA CURRICULAR ACTIVITIES

**President, Phan Debate Club**

**Aug 2017 - Aug 2018**

- Led high school debate club of 20+ members, organized events, sharing sessions, trainings, and debate competitions
- Collaborated with debate clubs nationwide and reached 1000+ followers on club's social media platforms
